November 20, 2008

Dear Water Shed Laboratories,

I just wanted to write and tell you how impressed we are with your Pesticide Spray Additive product. We have had a lingering problem with a scale disease on our sago palms at home for years. In addition to some smaller sago palms on the side of our home, we have a large 7 foot sago palm in our front yard that has been sickly and scale covered for several years. We had tried several other scale control solutions in the past with no noticeable results. I considered taking the tree down several times, but hated to do it because it used to be such a beautiful plant.

We tried your Pesticide Spray Additive in a mix with Malathion oil and have been very pleased with the results. Within 2 – 3 weeks we saw new growth, and now several months later, the tree looks better than it has in years. The other smaller sago palms are also looking better with new growth and no scale.

Sincerely,

A handwritten signature in black ink that reads 'Denny Mahle'. The signature is written in a cursive style with a large, sweeping initial 'D'.
